Reference letter for Pablo GALVE

To whom it may concern,

During the course 2021-2022, I have tought Pablo "JavaScript Programming" and "Web Design" (the two Web front-end courses that are part of the official Spanish national diploma named "Web Applications Development", level 5 of ISCED and EQF).

During the 9 months that I have shared with Pablo, two main characteristics have specially impressed me from him.

To begin with, his technical knowledge and skills. He has a very curious mind, enjoys the deep understanding of how the things work technically, pays attention to the details and to the flaws. He finds interesting and original solutions to the problems he encounters, and he always gets the things done. He learns very quickly from his mistakes and he reaches difficult places that are far out of the scope of the majority of his classmates.

The second characteristic can be summarized in this way: you can count on him. Pablo is an outstanding hard worker. He does not look for any excuses. He always tells you the things as they are, with an extraordinary sense of integrity. He is self-sufficient and receives feedback in a very positive way.

In summary, Pablo has been a delight to work with in and academic context, and I am sure that he will excel in a professional context, becoming an invaluable asset for the company that will have the chance to hire him.

Please do not hesitate to contact me if you need any further information.

Yours faithfully,

Daniel MARCELO
IT Professor at the IES Juan de Garay (Valencia, Spain)

e-mail: **d.marcelo@edu.gva.es**

My brief resume, as a reference:

I am a Telecommunications Engineer that worked for almost ten years as software developer in the telecom industry, with exceptional professionals and for projects in Europe, Asia and America.

I began at Sema Group (later merged with AtosOrigin). Then, after a brief period in Motorola, I took the leap to work for an outstanding startup named NetSpira. The pioneering technology we developed for Deep Packet Inspection was worth our later acquisition by Ericsson.

Several years after that acquisition, I discovered my deep vocation for becoming IT professor. I made the switch in 2009. Since then, I have continued learning every single day (besides teaching).
